

COMMENCEMENT NOTICE

Urban Heat Recovery Centre Project

July 8, 2026

Lonsdale Energy is providing this notice in advance of the upcoming construction of the Urban Heat Recovery Centre at 720 W. 2nd Street. The new, low-carbon energy centre will connect to the local community energy network which provides heating to more than 18,000 City residents.

Project Description

Rendering of the Urban Heat Recovery Centre

The Urban Heat Recovery Centre introduces an innovative way to serve the community. Daily activities like showering, washing dishes, and doing laundry send large amounts of warm water down the drain. Lonsdale Energy will capture and recycle that lost heat, turning it into a reliable source of low-carbon energy for buildings throughout the city.

Once in operation, the centre is expected to reduce community emissions by roughly 7,600 tonnes of CO₂e each year.

Construction Schedule

Site mobilization is scheduled to begin on July 13, 2026, with construction starting soon after. Construction is currently targeted for completion by late-2027. Construction activities will be managed to minimize disruption wherever possible, with workers coordinating with local businesses and residents to reduce impacts on day-to-day activities.

Contact Information

For questions or concerns related to construction activities, please contact the lead contractor, PCL:

Greg Hamilton
PCL Constructors Westcoast Inc.
Phone: 778-389-9248
Email: grhamilton@pcl.com

If there are any significant construction updates or impacts that may affect the surrounding area, PCL will provide further notice as required.

We thank you for your understanding and cooperation as we deliver this important low-carbon energy infrastructure project to our city.

Sincerely,

Lonsdale Energy
